XVIII, "Jewetts of England and America."

"MYSTERY CITY" FOUND UNDER SOVIET BUILDING

LONDON.—A Soviet expedition has discovered, 1943, a "mystery city" that flourished from the first to the twelfth century, when it was razed by Genghis Khan, under an electric power station in Russian Turkestan, the *Soviet War News*, published in London, said recently.

No reference to the city appears in any available historical material. However, the excavation, carried out by the Soviet Institute of History of Material Culture, revealed a troubled history, dating from the seventh and eighth centuries, with traces of destruction coinciding with the Arab conquest of central Asia.

Below the city's strata Soviet scientists have found traces of a still older civilization of the Anau type belonging to the thirtieth or twentieth century before Christ.
